Professional Summary

SOC-focused security analyst with 2+ years of enterprise experience triaging alerts, validating suspicious activity using logs/telemetry, and producing escalation-ready tickets. Strong at separating false positives from real risk, building incident timelines, capturing IOCs, and writing playbooks that improve consistency. Hands-on SIEM practice (Microsoft Sentinel, Wazuh) and endpoint investigation support (Microsoft Defender for Endpoint); solid fundamentals in DNS, HTTP/S, TCP/IP, and cloud logging (AWS CloudTrail).

Professional Experience

DevOps / Cloud Security / Security Support Engineer

Feb 2022 – Nov 2023

Accenture — Hyderabad, India

- Triaged security and availability alerts using logs, metrics, and change context; produced escalation-ready timelines and actions taken in ServiceNow/Jira.
- Cut triage time by ~30% by standardizing evidence capture (source, timestamp, scope, impact) and improving handoff notes to senior responders.
- Reduced alert noise by ~25% by tuning thresholds and updating runbook decision points (what to check first, what confirms true positive).
- Validated endpoint detections in Microsoft Defender for Endpoint; captured IOCs (process/host/user context) and documented containment and recovery outcomes.
- Tracked vulnerability remediation from Qualys/Nessus/Rapid7 outputs; prioritized by CVSS and exposure and verified closure via re-scan evidence.
- Used AWS CloudTrail to review activity during investigations and validate access intent; documented approvals/exceptions aligned to least privilege.
- Automated repeatable checks and evidence collection with Python/PowerShell/Bash and Ansible; saved 3–5 hours/week and reduced manual effort by ~35%.

Academic Experience

Cybersecurity Student

Jan 2024 – Dec 2025

University of North Texas (UNT) — Denton, TX, USA

- Built a Wazuh SIEM/EDR lab to practice alert triage, log correlation, and tuning; documented playbooks with evidence checklists and escalation thresholds.
- Performed packet-level investigations using Wireshark/tcpdump; validated DNS/HTTP/TLS behavior to confirm or reject intrusion hypotheses.
- Produced STRIDE threat models, data flow diagrams, and security requirements docs to connect data movement to controls and monitoring expectations.

Projects

Microsoft Sentinel Training Lab (SIEM Ingestion, Detections, Incidents) — github.com/VibhavChennamadhava/Sentinel-Training-Lab

- Built end-to-end Sentinel workflows: data connectors, analytics rules, incident triage, investigation notes, and reporting.
- Practiced KQL-driven validation and wrote escalation-ready incident documentation (timeline, scope, IOCs, next actions).

Wazuh SIEM/EDR Home Lab Implementations — github.com/VibhavChennamadhava

- Implemented detections (auth failures, process anomalies, file integrity monitoring) and tuning notes to improve signal quality.
- Wrote triage playbooks that specify what evidence to pull and when to escalate to Tier 2.

SOC Lab (Wazuh) — Brute-Force Detection POC — github.com/VibhavChennamadhava/SOC_lab

- Implemented brute-force detection workflow and documented investigation steps, IOCs to capture, and response guidance.

Hack The Box (HTB) Community Writeups — github.com/VibhavChennamadhava

- Authored writeups that read like mini incident reports: evidence, attack chain, root cause, and hardening steps to prevent recurrence.

IP Spoofing Lab (GNS3) — github.com/VibhavChennamadhava/IP_spoofing_lab

- Demonstrated spoofing behavior and prevention controls; validated outcomes with packet capture and verification notes.

Certifications

CompTIA Security+ (active)

Skills

SOC Triage: alert validation, false-positive analysis, IOC capture, incident timelines, escalation handoffs, ticket quality

SIEM/EDR: Microsoft Sentinel (lab), Wazuh (home lab), Microsoft Defender for Endpoint (investigation support), log correlation

Network: TCP/IP, DNS, HTTP/S, TLS; packet analysis (Wireshark/tcpdump)

Vulnerability Ops: CVE/CVSS triage, remediation tracking, re-test evidence; Qualys/Nessus/Rapid7 exposure

Cloud Visibility: AWS CloudTrail, IAM least privilege concepts, KMS/VPC/Organizations exposure

Automation: Python, Bash, PowerShell; Ansible playbooks; evidence collection automation

Process: SOPs/runbooks, shift handovers, incident reports, stakeholder summaries; ServiceNow/Jira

Education

Master of Science in Cybersecurity — University of North Texas (UNT), Denton, TX

Bachelor of Engineering, Computer Science — JB Institute of Engineering, India
